

Project #5

Starting from fresh with the base code. I made a basic quadrilateral and converted a png of my dog into a bmp to add as a texture. I mapped it onto the quad and stretched out the dimensions to better fit her CHONK. I then added the vST to the .vert and then cleaned up and redid the .frag to allow for the effects. Since the quad dimensions are stretched, the lens circle is also stretched because of how it equates its shape. All effects are functional though i made the swirl, zoom, and mosaic, toggles instead of sliders.
